XX Claim 3; Page 30; 46pp; English.
XX
XX This sequence represents the complementarity determining region-1 (CDR-1)
XX of the rW12 heavy chain. This sequence is used in an antibody of the
XX invention. The antibody of the invention is a chimeric or humanised anti-
XX idiotype antibodies (cAb and hAb, respectively) or a fragment which
XX specifically binds to the idiotype region of an anti-carcinoembryonic

CC antigen (CEA), where: (i) cAb comprises the rW12 light (L) and heavy (H)
CC chain variable regions, or silent mutations; and (ii) hAb comprises rW12
CC complementarity determining regions (CDR) and humanised framework (FR)
CC regions. The hAb is used as a vaccine to stimulate an immune response in
CC a patient against cancers expressing CEA. The hAb, can be used to clear
CC non-targeted antibody in a method of diagnosis or treatment of a patient
CC where a CEA antibody is used as a (pre-)targeting or therapy agent. The
CC cAb is used to detect the presence of an antibody that specifically binds
CC to CEA in a sample

XX
XX New human monoclonal antibody specifically binding the capsular
XX polysaccharide glucuronoxylomannan (GXM) of Cryptococcus neoformans,
XX useful for treating or diagnosing cryptococcal infections.
XX
XX Example 4; Fig 3; 56pp; English.
XX
XX This sequence represents a complementarity determining region (CDR) which
XX was used in the generation of the monoclonal antibody (MAb) of the
XX invention. The MAb of the invention or its antigen-binding portion
XX specifically binds the capsular polysaccharide glucuronoxylomannan (GXM)
XX of Cryptococcus neoformans and comprises a heavy and/or light chain amino
XX acid sequence having CDR1, CDR2 and CDR3 amino sequences of a human VH 3-
XX 64 or VH-6-1 gene, or human Vh A27 gene, respectively, with or without a
XX signal sequence, where the sequence have up to 6 mutations from the
XX germline gene sequence. The MAb of the invention may be used for
XX detection, prevention and/or treatment of C. neoformans infection.

 PT antibodies - useful in detection of anti-CEA antibodies and as vaccine to
 PT stimulate immune response against cancer.
 XX
 XX Claim 7; Fig 1; 46pp; English.
 XX
 XX This sequence represents a modified version of the rat rW12 heavy chain
 CC variable region, designated KOLWI2VH-1. This sequence is used in an
 CC antibody of the invention. The antibody of the invention is a chimeric or
 CC humanised anti-idiotype antibodies (cAb and hAb, respectively) or a
 CC fragment which specifically binds to the idiotype region of an anti-
 CC carcinoembryonic antigen (CEA), where: (i) cAb comprises the rW12 light
 CC (L) and heavy (H) chain variable regions, or silent mutations; and (ii)
 CC hAb comprises rW12 complementarity determining regions (CDR) and
 CC humanised framework (FR) regions. The hAb is used as a vaccine to
 CC stimulate an immune response in a patient against cancers expressing CEA.

CC The hAb, can be used to clear non-targeted antibody in a method of
 CC diagnosis or treatment of a patient where a CEA antibody is used as a
 CC (pre-)targeting or therapy agent. The cAb is used to detect the presence
 CC of an antibody that specifically binds to CEA in a sample

XX Chimeric and humanised anti-carcinoembryonic antigen anti-idiotype
 antibodies - useful in detection of anti-CEA antibodies and as vaccine to
 stimulate immune response against cancer.

XX Claim 7; Fig 1; 46pp; English.

XX This sequence represents a modified version of the rat rW12 heavy chain
 variable region, designated KOLW12VH-2. This sequence is used in an
 antibody of the invention. The antibody of the invention is a chimeric or
 humanised anti-idiotype antibodies (cAb and hAb, respectively) or a
 fragment which specifically binds to the idiotype region of an anti-
 carcinoembryonic antigen (CEA), where: (i) cAb comprises the rW12 light
 (L) and heavy (H) chain variable regions, or silent mutations; and (ii)
 hAb comprises rW12 complementarity determining regions (CDR) and
 humanised framework (FR) regions. The hAb is used as a vaccine to
 stimulate an immune response in a patient against cancers expressing CEA.
 The hAb, can be used to clear non-targeted antibody in a method of
 diagnosis or treatment of a patient where a CEA antibody is used as a
 (pre-)targeting or therapy agent. The cAb is used to detect the presence
 of an antibody that specifically binds to CEA in a sample

XX
XX Antibodies binding to prostate stem cell antigen inhibit the growth of
PT cancer cells and are used to detect and treat prostate, pancreatic or
PT bladder cancers.
XX
XX Example 21; Fig 60; 127pp; English.
XX
XX The present invention relates to new antibodies that specifically bind a
CC novel prostate stem cell antigen (PSCA), which is widely over-expressed
CC across all stages of prostate cancer. The antibodies of the invention are
CC useful to kill tumour cells expressing PSCA and as PSCA expression is
CC observed in prostate tumour cells and in other human cancers,
CC particularly bladder and pancreatic carcinomas, the antibodies are useful
CC therapeutically to treat these diseases. In particular, monoclonal
CC antibodies can be administered to subjects suffering from PSCA-associated
CC cancers, e.g. prostate, bladder or pancreatic cancer or metastatic
CC prostate, bladder or pancreatic cancer, to inhibit the cancer and prolong
CC the subject's life. The antibodies can be combined with a therapeutic
CC agent in immunoconjugates useful to treat subjects suffering from
CC malignant diseases, characterised by cells having PSCA antigen on the
CC cell surface e.g. cancers, by killing the cells. The antibodies and
CC immunoconjugates may also be included with a carrier in pharmaceutical
CC compositions useful to kill human cells expressing PSCA antigen on the
CC cell surface. The antibodies are also useful diagnostically to detect
CC cancers, especially prostate cancer, to isolate prostate cancer cells
CC e.g. to enable culture growth to evaluate candidate therapeutic
CC compounds, assist in identification of rare genes associated with
CC prostate cancer, and to isolate and purify PSCA and PSCA homologues. The
CC present amino acid sequence represents the mouse heavy chain variable
CC domain region of the PSCA monoclonal antibody 2H9 of the invention

 PT Antibodies against B Lymphocyte Stimulating polypeptides, useful for the
 PT diagnosis and treatment of cancers and immune disorders.
 XX
 XX Claim 1; Page 1564-1565; 3148pp; English.
 PS
 XX This invention describes novel antibodies that immunospecifically bind to
 CC B lymphocyte stimulator (Blys) polypeptides. Blys is a member of the
 CC tumour necrosis factor (TNF) super family and induces B cell
 CC proliferation and differentiation. The antibodies of the invention have
 CC cytostatic, immunosuppressive, immunostimulant, immunomodulatory,
 CC antirheumatic and antiAIDS activity and can be used in vaccines to
 CC inhibit the expression and activity of Blys. The antibodies bind to Blys
 CC and so may be used to detect and quantitate the presence of Blys in
 CC biological samples and may be used in this way to diagnose disease
 CC associated with aberrant expression of Blys. They may also be
 CC administered to treat diseases associated with aberrant Blys expression
 CC and activity such as cancer, immune, and autoimmune disorders and
 CC diseases, e.g. systemic lupus erythematosus, rheumatoid arthritis,
 CC immunodeficiency (e.g. common variable immunodeficiency (CVID) and
 CC acquired immunodeficiency syndrome (AIDS)). ABP4390-ABP47228 represent
 CC the antibodies and fragments of the antibodies described in the method of
 CC the invention

 XX Novel antibody that immunospecifically binds to a B lymphocyte stimulator
 PT (Blys), useful for detecting and treating diseases or disorders e.g.
 PT rheumatoid arthritis, asthma and leukemia.
 XX
 XX Example 1; SEQ ID NO 974; 394pp; English.
 PS
 XX This invention relates to novel antibodies that immunospecifically bind
 CC to B lymphocyte stimulator (Blys). The Blys gene has been mapped to
 CC chromosome 13q34 and encodes a protein that is a member of the tumour
 CC necrosis factor superfamily and induces both in vivo and in vitro B cell
 CC proliferation and differentiation. Specifically, it refers to single
 CC chain antibody molecules (scFvs) derived, preferably, from the variable
 CC heavy CDR3 region that immunospecifically bind to a polypeptide, or
 CC fragment thereof, of either human, murine, rat or monkey Blys. The
 CC present invention refers to the use of such antibodies in various methods
 CC for the detection, diagnosis and prognosis of diseases related to the
 CC aberrant expression or inappropriate function of Blys or its receptor. As
 CC such, these compositions are useful for identifying immune disorders
 CC including myasthenia gravis and multiple sclerosis, inflammatory
 CC disorders e.g. asthma and rheumatoid arthritis, infectious diseases such
 CC as AIDS and proliferative disorders including leukaemia, carcinoma and
 CC lymphoma. Accordingly, they can be described as exhibiting various
 CC activities such as antirheumatic, antiasthmatic, antiallergic and cytostatic.
 CC antiinflammatory, antiasthmatic, antiallergic and cytostatic. This
 CC polypeptide sequence is a single chain antibody that binds Blys of the
 CC invention. NOTE: The sequence data for this patent did not form part of
 CC the printed specification, but was obtained in electronic format
 CC directly from WIPO at ftp.wipo.int/pub/published pct_sequences.

XX Propionibacterium acnes polypeptides and nucleic acids useful for
PT vaccinating against and diagnosing infections, especially useful for
PT treating acne vulgaris.
XX

XX Example 1; SEQ ID NO 23999; 1069pp; English.

XX Sequences AAU39105-AAU68017 represent *Propionibacterium acnes* immunogenic
CC polypeptides. The proteins and their associated DNA sequences are used in
CC the treatment, prevention and diagnosis of medical conditions caused by
CC *P. acnes*. The disorders include SAPHO syndrome (synovitis, acne,
CC pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis.
CC *P. acnes* is also involved in infections of bone, joints and the central
CC nervous system, however it is particularly involved in the inflammatory
CC lesions associated with acne vulgaris. A method for detecting the
CC presence or absence of *P. acnes* in a patient comprises contacting a
CC sample with a binding agent that binds to the proteins of the invention
CC and determining the amount of bound protein in the sample. The
CC polypeptides may be used as antigens in the production of antibodies
CC specific for *P. acnes* proteins. These antibodies can be used to
CC downregulate expression and activity of *P. acnes* polypeptides and
CC therefore treat *P. acnes* infections. The antibodies may also be used as
CC diagnostic agents for determining *P. acnes* presence, for example, by
CC enzyme linked immunosorbent assay (ELISA). Note: The sequence data for
CC this patent did not form part of the printed specification, but was
CC obtained in electronic format directly from WIPO at

XX PT New Propionibacterium acnes polypeptides and polynucleotides encoding the
PT polypeptide, useful for diagnosing, preventing or treating acne vulgaris,
PT or for stimulating an immune response specific for a P. acnes protein.

PS Example 1; SEQ ID NO 23999; 1481pp; English.

XX The invention relates to an isolated polynucleotide (ACF64435-ACF64733)
CC encoding a Propionibacterium acnes protein. The invention also relates to
CC polypeptides encoded by the polynucleotides (ABMS5624-ABM64536) and to
CC immunogenic fragments of P. acnes polypeptides. The invention
CC additionally encompasses expression vectors and host cells comprising a
CC polynucleotide of the invention; antibodies against polypeptides of the
CC invention; fusion proteins comprising a polypeptide of the invention; a
CC method for stimulating an immune response specific for a P. acnes
CC polypeptide and an isolated T cell population comprising T cells prepared
CC via this method; a vaccine composition (comprising P. acnes polypeptides,
CC polynucleotides, antibodies, fusion proteins, T cell populations, or
CC antigen-presenting cells that express the polypeptide); a method and kit
CC for detecting or determining the presence or absence of P. acnes in a
CC patient; and a method for inhibiting the development of P. acnes in a
CC patient. The P. acnes polypeptides, polynucleotides, antibodies, fusion
CC proteins, T cell populations or antigen-presenting cells that express the
CC polypeptides are useful for diagnosing, preventing or treating acne
CC vulgaris, or for stimulating an immune response specific for a P. acnes
CC protein. The polynucleotides can also be used as probes or primers for
CC nucleic acid hybridisation. The vaccine composition is useful for the
CC stimulation of an immune response against P. acnes, or for treating acne,
CC and the kit is useful for performing a diagnostic assay. The present

CC sequence represents a polypeptide predicted to be encoded by an ORF (open
CC reading frame) contained within the P. acnes polynucleotides of the
CC invention. Note: The sequence data for this patent did not form part of
CC the printed specification, but was obtained in electronic format directly
CC from WIPO at ftp.wipo.int/pub/published_pct_sequences

XX PT New antisense nucleic acids, useful for identifying proteins or screening
PT for homologous nucleic acids required for cellular proliferation to
PT isolate candidate molecules for rational drug discovery programs.

PS Claim 25; SEQ ID NO 63299; 1766pp; English.

XX The invention relates to an isolated nucleic acid comprising any one of
CC the 6213 antisense sequences given in the specification where expression
CC of the nucleic acid inhibits proliferation of a cell. Also included are:
CC (1) a vector comprising a promoter operably linked to the nucleic acid
CC encoding a polypeptide whose expression is inhibited by the antisense
CC nucleic acid; (2) a host cell containing the vector; (3) an isolated
CC polypeptide or its fragment whose expression is inhibited by the
CC antisense nucleic acid; (4) an antibody capable of specifically binding
CC the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular
CC proliferation or the activity of a gene in an operon required for
CC proliferation; (7) identifying a compound that influences the activity of
CC the gene product or that has an activity against a biological pathway
CC required for proliferation, or that inhibits cellular proliferation; (8)
CC identifying a gene required for cellular proliferation or the biological
CC pathway in which a proliferation-required gene or its gene product lies
CC or a gene on which the test compound that inhibits proliferation of an

CC organism acts; (9) manufacturing an antibiotic; (10) profiling a
CC compound's activity; (11) a culture comprising strains in which the gene
CC product is overexpressed or underexpressed; (12) determining the extent
CC to which each of the strains is present in a culture or collection of
CC strains; or (13) identifying the target of a compound that inhibits the
CC proliferation of an organism. The antisense nucleic acids are useful for
CC identifying proteins or screening for homologous nucleic acids required
CC for cellular proliferation to isolate candidate molecules for rational
CC drug discovery programs, or for screening homologous nucleic acids
CC required for proliferation in cells other than *S. aureus*, *S. typhimurium*,
CC *K. pneumoniae* or *P. aeruginosa*. The present sequence is encoded by one of
CC the target prokaryotic essential genes. Note: The sequence data for this
CC patent did not form part of the printed specification, but was obtained
CC in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

XX Constructing strains for identifying gene products as effective targets
XX for therapeutic intervention, by inactivating in the strain one allele of
XX a gene and placing other allele of the gene under conditional expression.

XX Claim 44; SEQ ID NO 7816; 167pp + Sequence Listing; English.

XX The invention relates to constructing (M1) a strain of diploid fungal
XX cells in which both alleles of a gene are modified, comprising modifying
XX one allele by insertion or replacement by a cassette having an
XX expressible selectable marker and modifying other allele by
XX recombination, of a promoter replacement fragment with a heterologous
XX promoter, so that expression of the second allele is regulated by the
XX promoter. (M1) is useful for constructing a strain of diploid fungal
XX cells in which both alleles of a gene are modified. The diploid fungal
XX cells having both alleles modified are useful for identifying a gene that
XX is essential to the survival or growth of a fungus, a gene that
XX contributes to the virulence and/or pathogenicity of a fungus, a gene
XX that contributes to the resistance of a diploid fungus to an antifungal
XX agent, an antifungal agent that inhibits the growth of a diploid fungus
XX and for identifying a therapeutic agent for treatment of a mammalian
XX disease. (M1) is useful for identifying a compound which modulates the
XX activity of a gene product, preferably enzymatic activity, carbon
XX compound catabolism, biosynthetic, transporter, transcriptional,
XX translational, signal transduction, DNA replication and cell division
XX activity. The method is useful for identifying a compound having the
XX ability to inhibit growth or proliferation of *C. albicans* cells and for
XX treating infection by *C. albicans*. The present sequence is that of an
XX essential Candida albicans protein used in the method of the invention.
XX Note: The sequence data for this patent is not represented in the printed
XX specification but is based on sequence information supplied to Derwent by
XX the European Patent Office

 PS Claim 25; SEQ ID NO 67258; 1766pp; English.
 XX

The invention relates to an isolated nucleic acid comprising any one of
 the 6213 antisense sequences given in the specification where expression
 of the nucleic acid inhibits proliferation of a cell. Also included are:
 (1) a vector comprising a promoter operably linked to the nucleic acid
 encoding a polypeptide whose expression is inhibited by the antisense
 nucleic acid; (2) a host cell containing the vector; (3) an isolated
 polypeptide or its fragment whose expression is inhibited by the
 antisense nucleic acid; (4) an antibody capable of specifically binding
 the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular
 proliferation or the activity of a gene in an operon required for
 proliferation; (7) identifying a compound that influences the activity of
 the gene product or that has an activity against a biological pathway
 required for proliferation, or that inhibits cellular proliferation; (8)
 identifying a gene required for cellular proliferation or the biological
 pathway in which a proliferation-required gene or its gene product lies
 or a gene on which the test compound that inhibits proliferation of an
 organism acts; (9) manufacturing an antibiotic; (10) profiling a
 compound's activity; (11) a culture comprising strains in which the gene
 product is overexpressed or underexpressed; (12) determining the extent
 to which each of the strains is present in a culture or collection of
 strains; or (13) identifying the target of a compound that inhibits the
 proliferation of an organism. The antisense nucleic acids are useful for
 identifying proteins or screening for homologous nucleic acids required
 for cellular proliferation to isolate candidate molecules for rational

CC drug discovery programs, or for screening homologous nucleic acids

 PT Genomic sequence of Photorhabdus luminescens and encoded polypeptides,
 PT useful e.g. as therapeutic antimicrobials and agricultural pesticides.
 XX
 PS Claim 2; SEQ ID NO 1333; 1205pp; French.
 XX

The invention relates to the isolation of genes and their encoded
 proteins from Photorhabdus luminescens. The isolated sequences are
 sources of probes and primers for detecting the genome of *P. luminescens*
 and related species; to study polymorphisms; for gene analysis and for
 detection/amplification of the genes. Antibodies (Ab) raised against the
 polypeptides encoded by the genes are used for detection/identification
 of *P. luminescens*, e.g. in foods. The genes, proteins, Ab and cells that
 carry a gene-containing vector are used to select compounds that
 modulate, regulate, induce or inhibit expression of the genes in plants,
 animals or microorganisms other than *P. luminescens* and are able to alter
 response or sensitivity to toxins and antibiotics produced by *P.*
luminescens. Cells transformed to express the genes are useful for
 recombinant production of the proteins, particularly toxins and
 antibacterials useful as insecticides, bactericides and fungicides. The
 genes, proteins, vectors containing the genes and Ab are also useful
 therapeutically (to treat microbial infection by bacteria or fungi that

are sensitive to P. luminescens-encoded toxins or antibiotics) and as biopesticides. Other uses of the genes and the proteins are as virulence factors and for identifying targets of human diseases for which P. luminescens is a model (particularly plague and whooping cough). This sequence represents one of the isolated P. luminescens proteins

XX New nucleic acid encoding a branching enzyme, useful for in vitro

PT synthesis of branched glucans and to prepare transgenic plants producing

PT modified starch.

XX Claim 1a; Page 96-99; 115pp; German.

XX This invention describes a novel nucleic acid (I) isolated from Neisseria

CC which encodes a branching enzyme (II). (I) is used for recombinant

CC production of (II) subsequently used in the in vitro production of alpha-

CC 1,6-branched alpha-1,4-glucans. It is also used to prepare transgenic

CC plants that produce starches with modified properties. (III) are used as

CC binders for tablets, carriers for pharmaceuticals, flavors and perfumes

CC and powdered additives, packaging materials, ultra-violet light adsorbers

CC in sunscreens and also for any of the usual applications of starch in

CC foods, papermaking, as textile size, in soil stabilization, as wetting

CC agent for agricultural chemicals, as polymer additives etc. Fragments of

CC (I) are useful as PCR primers and antisense molecules or ribozymes for

CC inhibiting expression of (II), and the regulatory region of (II) can be

CC used to control expression of heterologous sequences in host cells. (I)

CC provides an inexpensive method for producing alpha-1,6-branched alpha-1,4

CC -glucans (III), producing products that can be tailored for particular

CC applications, particularly by controlling the degree of branching. Starch

CC from transgenic plants has increased gel strength, reduced phosphate

CC content; reduced peak viscosity; lower pasting temperature and granule

CC size and/or altered sidechain distribution. This sequence represents an

CC alpha-1,6-branched alpha-1,4-glucan isolated from Neisseria denitrificans

CC which is described in the method of the invention

XX PT New nucleic acid encoding mutated chloride channel proteins, useful for
 PT identifying specific channel inhibitors, as potential agents for treating
 PT e.g. osteoporosis.

XX PS Disclosure; Page 39-40; 52pp; German.

XX CC The present invention relates to coding sequences of chloride channel
 CC proteins CIC-3, CIC-4, CIC-6 and CIC-7 which have been altered by
 CC mutation, truncation or (partial) deletion. Cell lines containing such
 CC coding sequences are used to identify and test substances that inhibit
 CC chloride channel proteins, especially specific inhibitors. Inhibitors of
 CC CIC-7 are used for treating osteoporosis and Paget's disease; inhibitors
 CC of other chloride channel proteins are useful for treating neurological
 CC or neuromuscular diseases or other nerve disorders, also generally used
 CC as psychopharmaceuticals. The present sequence is a rat protein shown in
 CC the exemplification of the invention

XX PT New transgenic mouse comprising a disruption in a CLCN7 (chloride ion
 PT channel) gene useful as models for diseases, disorders or conditions
 PT associated with phenotypes relating to a disruption in a CLCN7 gene.

XX PS Disclosure; Fig 2; 65pp; English.

XX CC This sequence shows the murine CLCN7 (chloride ion channel) protein. The
 CC CLCN7 cDNA sequence was disrupted in the transgenic mouse of the
 CC invention in which there is no native expression of endogenous CLCN7
 CC gene. Mice having disruptions in the CLCN7 gene exhibit musculoskeletal
 CC abnormalities, and may alternatively or additionally exhibit an immune
 CC system abnormality. The transgenic mice are useful as models for
 CC diseases, disorders or conditions associated with phenotypes relating to
 CC a disruption in a CLCN7 gene; in the identification of drugs,
 CC pharmaceuticals, therapies and interventions that may be effective in
 CC treating a disease or other phenotypic characteristic of the animal; in
 CC the identification of compounds capable of ameliorating disease symptoms;
 CC and in testing and developing new treatments relating to behavioural
 CC phenotypes

DR
XX Identifying pain-regulating compounds, useful for treating chronic pain
PT and for diagnosis, by measuring binding of compounds to specific peptides
PT and proteins.
XX
XX Claim 1; Fig 40; 213pp; German.
PS

XX The invention relates to identifying pain-regulating substances (A)
CC comprises (i) incubating a test substance with a cell (or preparation
CC from it) that has synthesised a peptide or protein (B) and (ii) measuring
CC either binding of the test substance to (B) or some functional parameter
CC that is altered by this binding. The method is useful for identifying
CC pain-regulating substances (A) with analgesic activity. (A) along with
CC nucleic acid (ABL88411-ABL88441) that encode proteins (B, ABB85006-
CC ABB85037) that interact with (A); (B); vectors containing the nucleic
CC acid; antibodies against (B); cells that express (B) and agents that bind
CC to (B), are all useful for treating pain, particularly chronic pain,
CC including use in gene therapy. The same materials can also be used for
CC diagnosis, e.g. of neurological and neurodegenerative diseases. The
CC present sequence is that of a polypeptide of the invention

PT Identifying a mitochondrial target for drug screening assays and for
PT treating diseases associated with altered mitochondrial function,
PT comprises detecting a modified polypeptide in a sample and correlating
PT with the disease.
XX
PS Claim 1; SEQ ID NO 1815; 180pp; English.
XX
CC This invention relates to novel mitochondrial targets that can be used
CC for therapeutic intervention in treating a disease associated with
CC altered mitochondrial function. Specifically, it refers to a method for
CC identifying proteins of the human heart mitochondrial proteome that are
CC useful for drug screening assays, as well as therapeutic targets. The
CC present invention describes a method for identifying such proteins that
CC can be used in the treatment of various diseases associated with altered
CC mitochondrial function including diabetes mellitus, Huntington's disease,
CC osteoarthritis, Leber's hereditary optic neuropathy (LHON), mitochondrial
CC encephalopathy lactic acidosis and stroke (MELAS), myoclonic epilepsy
CC ragged red fibre syndrome (MERRF) or cancer. Accordingly, these
CC compositions have neuroprotective, nootropic, antidiabetic,
CC anticonvulsant, antiarthritic, osteopathic, ophthalmological and
CC cytostatic activities. This polypeptide sequence is a human heart
CC mitochondrial protein of the invention.

PT Early detection of soft tissue sarcoma comprises determining expression
PT of a gene in a first soft tissue sample and a normal soft tissue sample
PT and comparing the gene expression, also useful in treating soft tissue
PT sarcoma.
XX
PS Example 2; SEQ ID NO 1059; 210pp; English.
XX
CC The invention relates to a novel method for detecting soft tissue sarcoma
CC which comprises obtaining a first soft tissue sample from an individual
CC and a normal soft tissue sample from the same or different individual,
CC determining the expression of a gene in both samples and comparing the
CC expression of the gene in both soft tissue samples, where a higher level
CC of protein expression in the first soft tissue sample indicates the
CC presence of soft tissue sarcoma. The method of the invention has
CC cytostatic applications and may be useful for detecting soft tissue
CC sarcoma, possibly via gene therapy or vaccine production. The nucleic
CC acid sequences may be useful in diagnostic and screening applications.
CC The current sequence is that of a human soft tissue sarcoma-upregulated
CC protein of the invention. The current sequence is not shown within the
CC specification per se but was submitted in CD format by the inventor.

XX
XX Claim 12; SEQ ID NO 4373; 7273pp; English.
XX
XX The invention relates to human tumour-associated antigenic target (TAT)
CC polypeptides, and their related nucleic acids. The TAT polypeptides are
CC overexpressed in cancer tissues compared to normal tissues, and may thus
CC serve as effective targets for the diagnosis and treatment of cancer in
CC mammals. The invention also relates to nucleic acid and polypeptide
CC sequences at least 80% identical to the TAT nucleic acids and
CC polypeptides; expression vectors and host cells comprising a TAT nucleic
CC acid; an antibody specific for a TAT polypeptide; a peptide or organic
CC molecule which binds to a TAT polypeptide; fusion proteins comprising a
CC TAT polypeptide; and methods and compositions for the treatment or
CC diagnosis of cancer in mammals. TAT polypeptides, nucleic acids,
CC antibodies, antagonists, binding molecules and compositions are useful
CC for diagnosing or treating a cell proliferative disorder associated with
CC increased TAT expression, particularly cancers such as breast cancer,
CC colorectal cancer, lung cancer, ovarian cancer, liver cancer, bladder
CC cancer, pancreatic cancer, cervical cancer, cancers of the central
CC nervous system, melanoma and leukaemia. TAT nucleic acids may further be
CC used as hybridisation probes, in chromosome and gene mapping, in
CC chromosome identification and in gene therapy. The present sequence
CC represents a TAT polypeptide of the invention

XX
PS  Claim 20; SEQ ID NO 49833; 103pp; English.
XX
CC  The invention relates to isolated polynucleotide (I) and polypeptide (II)
XX  sequences. (I) is useful as hybridisation probes, polymerase chain
XX  reaction (PCR) primers, oligomers, and for chromosome and gene mapping,
XX  and in recombinant production of (II). The polynucleotides are also used
XX  in diagnostics as expressed sequence tags for identifying expressed
XX  genes. (I) is useful in gene therapy techniques to restore normal
XX  activity of (II) or to treat disease states involving (II). (II) is
XX  useful for generating antibodies against it, detecting or quantitating a
XX  polypeptide in tissue, as molecular weight markers and as a food
XX  supplement. (II) and its binding partners are useful in medical imaging
XX  of sites expressing (II). (I) and (II) are useful for treating disorders
XX  involving aberrant protein expression or biological activity. The
XX  polypeptide and polynucleotide sequences have applications in
XX  diagnostics, forensics, gene mapping, identification of mutations
XX  responsible for genetic disorders or other traits to assess biodiversity
XX  and to produce other types of data and products dependent on DNA and
XX  amino acid sequences. ABG00010-ABG0377 represent novel human diagnostic

New diagnostic and therapeutic polynucleotides and polypeptides, useful
in diagnosing a condition, disease or disorder associated with human
molecules, e.g. autoimmune or inflammatory disorders, in gene therapy or
in gene mapping.
Claim 27; Page; 190pp; English.
The invention relates to novel diagnostic and therapeutic polynucleotides
selected from one of the 2722 sequences defined in the specification. A
polynucleotide of the invention may have a use in gene therapy. The human
diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be
used to diagnose a particular condition, disease or disorder associated
with human molecules, e.g. cell proliferative disorders,
autoimmune/inflammatory disorder, developmental disorder, endocrine
disorder, neurological disorders, gastrointestinal disorders, or
infections caused by virus, bacteria, fungi or parasite. The dithp
molecules may also be used in genetic mapping, in identifying individuals
from minute biological samples, in detecting single nucleotide
polymorphisms, as molecular weight markers, and for somatic or germline
gene therapy. The present sequence represents a dithp protein of the
invention. Note: The sequence data for this patent is not represented in
the printed specification, but was obtained in electronic format directly

 XX Claim 20; Page 263-264; 1963pp; English.
 PS
 XX Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and
 CC sequences ABA08225-ABA09574 represent nucleic acids encoding them. The
 CC invention also relates to vectors and recombinant host cells comprising a
 CC nucleotide of the invention, methods of producing the novel polypeptides,
 CC antibodies against the polypeptides, methods of detecting the nucleotides
 CC or polypeptides in a sample, and methods of identifying compounds which
 CC bind to polypeptides of the invention. Although novel, many of the
 CC polypeptides of the invention have homology to known proteins, and hence
 CC giving an insight into their probable biological activities, and hence
 CC potential therapeutic applications. The polypeptides of the invention may
 CC have various activities, including cytokine, cell proliferation or cell
 CC differentiation activities; stem cell growth factor activity;
 CC haematopoiesis regulatory activity; tissue growth activity;
 CC immunomodulatory activity; activin- or inhibin-related activities;
 CC chemotactic or chemokinetic activities; haemostatic, thrombotic or
 CC thrombolytic activities; receptor or ligand activities; or may be
 CC involved in oncogenesis; cancer cell proliferation or metastasis.
 CC Depending on their biological activities, polypeptides and nucleotides of
 CC the invention are useful for preventing, treating or ameliorating medical
 CC conditions, e.g., by protein or gene therapy. Such conditions include
 CC cancers, haematopoietic disorders (e.g., myeloid or lymphoid cell
 CC disorders), chronic inflammatory conditions (e.g., asthma or arthritis),
 CC proliferative retinopathy, atherosclerosis, coronary heart disease,
 CC arterial ischaemia, bone disorders (e.g., osteoporosis), and abnormal
 CC vascular growth. Polypeptides involved with tissue regeneration and
 CC repair (or nucleic acids encoding them) may be used to promote wound
 CC healing (e.g., of burns, incisions and ulcers), while those with
 CC immunomodulatory activities may be used in the treatment of viral,
 CC bacterial and fungal infections in addition to immune disorders.
 CC Polypeptides with growth factor activity may be used in cell cultures to
 CC promote cell growth. For example, such polypeptides may be used to
 CC manipulate stem cells in culture to give rise to neuroepithelial cells
 CC that can be used to augment or replace cells damaged by illness,
 CC autoimmune disease or accidental damage. The polypeptides and nucleotides
 CC may also be used in the diagnosis of the above conditions, and in drug
 CC screening techniques. The present sequence represents a novel human
 CC polypeptide of the invention

 XX New isolated polynucleotide and encoded polypeptides, useful in
 PT diagnostics, forensics, gene mapping, identification of mutations
 PT responsible for genetic disorders or other traits and to assess
 PT biodiversity.
 XX Claim 20; SEQ ID NO 49834; 103pp; English.
 PS The invention relates to isolated polynucleotide (I) and polypeptide (II)
 CC sequences. (I) is useful as hybridisation probes, polymerase chain
 CC reaction (PCR) primers, oligomers, and for chromosome and gene mapping,
 CC and in recombinant production of (II). The polynucleotides are also used
 CC in diagnostics as expressed sequence tags for identifying expressed
 CC genes. (I) is useful in gene therapy techniques to restore normal
 CC activity of (II) or to treat disease states involving (II). (II) is
 CC useful for generating antibodies against it, detecting or quantitating a
 CC polypeptide in tissue, as molecular weight markers and as a food
 CC supplement. (II) and its binding partners are useful in medical imaging
 CC of sites expressing (II). (I) and (II) are useful for treating disorders
 CC involving aberrant protein expression or biological activities in
 CC polypeptide and polynucleotide sequences have application of mutations
 CC diagnostics, forensics, gene mapping, identification of mutations
 CC responsible for genetic disorders or other traits to assess biodiversity
 CC and to produce other types of data and products dependent on DNA and
 CC amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic
 CC amino acid sequences of the invention. Note: The sequence data for this
 CC patent did not appear in the printed specification, but was obtained in
 CC electronic format directly from WIPO at
 CC ftp.wipo.int/pub/published_pct_sequences

 XX New Lactobacillus acidophilus nucleic acids and encoded polypeptides
 PT useful for imparting better fructo-oligosaccharide-utilizing capacity to
 PT probiotic bacteria, or for preventing or treating enteric infections or
 PT cancer.
 XX Claim 6; SEQ ID NO 150; 462pp; English.
 PS The invention relates to novel isolated nucleic acid molecule encoding
 CC fructo-oligosaccharide (FOS) utilization compounds. The invention further
 CC comprises: a vector comprising the nucleic acid; a host cell containing
 CC the vector; an isolated polypeptide encoded by the nucleic acid; an
 CC antibody that selectively binds the polypeptide; a method for producing
 CC the polypeptide from a culture of the host cell; detecting the
 CC bacterium to metabolize fructo-oligosaccharide (FOS) and/or other complex
 CC carbohydrates; modifying the ability of a bacterium to colonize the
 CC gastrointestinal tract of a host; stimulating the growth of beneficial
 CC commensals in the gastrointestinal tract of a mammal; a Lactobacillus
 CC bacterial strain with a modified ability to colonize the gastrointestinal
 CC tract of a host compared to a wild-type Lactobacillus bacterial strain,
 CC where the modified ability is due to overexpression of one or more
 CC heterologous FOS-related polypeptides cited above; a culture comprising
 CC the Lactobacillus bacterial strain; and an isolated nucleic acid comprising
 CC regulatory element comprising a nucleotide sequence selected from: SEQ ID
 CC NOs: 173, 174, 175, 353 or 354; a biologically active sequence comprising
 CC at least 50 consecutive residues of SEQ ID NO: 173, 353 or 354; a
 CC nucleotide sequence that hybridizes to the complement of the FOS isolated
 CC nucleic acid under stringent conditions; or a sequence with at least 90%
 CC identity to the FOS isolated nucleic acid which has biological activity
 CC as a regulatory control element. The FOS isolated nucleic acid has
 CC antimicrobial, antidiarrhetic, cytostatic, gastrointestinal-gen., and
 CC immunostimulant activities. The nucleic acids are useful for imparting
 CC better FOS-utilizing capacity to probiotic bacteria, including
 CC Lactobacillus. The bacteria or purified polypeptides may be used as food
 CC supplements in preventing or treating enteric infections, diarrheal
 CC diseases or cancer, and for stimulating the immune system. The bacteria
 CC are useful in the production of fermented milk products. This sequence

XX PT Produces polyketide involves culturing a cell under conditions under
XX PS which cell produces polyketide.
XX FS Disclosure; SEQ ID NO 24; 306pp; English.
XX CC The invention relates to a method of producing polyketide by culturing a
XX CC cell under conditions under which the cell produces the polyketide. The
XX CC cell comprises a recombinant polynucleotide synthase that comprises a
XX CC domain from the Streptomyces pulveraceus fostricetin polyketide synthase.
XX CC It does not make the polyketide in the absence of the recombinant
XX CC polynucleotide. The method is useful for producing a polyketide, e.g.
XX CC fostricetin, PD 113,270 or PD 113,271. The present sequence represents a
XX CC S. pulveraceus fostricetin synthase gene cluster protein.

A;Experimental source: skin
C;Comment: This copper protein is one of two enzymes that catalyze the oxidation of pep
le and dismutates to glyoxylate and the corresponding desglycine peptide alpha-amide. Th
hormones. The other enzyme is peptidyl alpha-amidating enzyme I.
C;Superfamily: peptidylglycine monooxygenase II; peptidylglycine monooxygenase I homolo
C;Keywords: copper; glycoprotein; monooxygenase II; oxidoreductase; transmembrane protein

CC -!- FUNCTION: Catalyzes the formation of the alpha-1,6-glucosidic
CC linkages in glycogen by scission of a 1,4-alpha-linked
CC oligosaccharide from growing alpha-1,4-glucan chains and the
CC subsequent attachment of the oligosaccharide to the alpha-1,6
CC position (By similarity).
CC -!- CATALYTIC ACTIVITY: Transfers a segment of a 1,4-alpha-D-glucan
CC chain to a primary hydroxy group in a similar glucan chain.
CC -!- PATHWAY: Glycogen biosynthesis; third step.
CC -!- SUBUNIT: Monomer (By similarity).
CC -!- SIMILARITY: Belongs to the glycosyl hydrolase 13 family.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

 XX Recovering a polypeptide that unfolds reversibly from a repertoire of
 PT polypeptides for treating e.g., cancer, by unfolding a portion of the
 PT displayed polypeptides and refolding a portion of the unfolded
 PT polypeptides.
 XX Disclosure; SEQ ID NO 147; 222pp; English.
 PS The invention describes a method of recovering a polypeptide that unfolds
 CC reversibly from a repertoire of polypeptides that unfolds reversibly and
 CC has a common selectable characteristic that distinguishes folded
 CC polypeptides from unfolded or misfolded polypeptides. The method
 CC comprises: providing a polypeptide display system comprising the
 CC repertoire of displayed polypeptides; unfolding at least a portion of the
 CC displayed polypeptides; refolding at least a portion of the unfolded
 CC polypeptides; and recovering at least one polypeptide that unfolds
 CC reversibly and has the selectable characteristic from the refolded
 CC portion. The method is useful in recovering a polypeptide that unfolds
 CC reversibly from a repertoire of polypeptides that unfolds reversibly. The
 CC library or repertoire is useful for selecting a polypeptide comprising an
 CC antibody variable domain that unfolds reversibly or a polypeptide that
 CC refolds reversibly and comprising an antibody format. The polypeptide is
 CC useful in the manufacture of a medicament for diagnosing, treating or
 CC preventing a disease or medical condition mediated by a cytokine,
 CC cytokine receptor, enzyme, enzyme co-factor or DNA binding protein, such
 CC as an inflammatory state, allergic hypersensitivity, cancer, bacterial or
 CC viral infection or an autoimmune disorder, e.g., asthma, psoriasis, Type
 CC I diabetes, multiple sclerosis, rheumatoid arthritis, systemic lupus
 CC erythematosus, Crohn's disease, myasthenia gravis, leukemia or solid
 CC tumor. This is the amino acid sequence of complementarity determining
 CC region (CDR) used in a polypeptide display system for selection of
 CC reversibly folding peptides.

PT New antibody binding to insulin-like growth factor I receptor (IGF-IR)
PT and inhibiting the binding of IGF-I and IGF-II to IGF-IR, useful for
PT treating cancers of the colon, breast, prostate and lung.
XX
PS Disclosure; SEQ ID NO 3; 81pp; English.
XX
CC The invention relates to a novel antibody binding to insulin-like growth
CC factor I receptor (IGF-IR) and inhibiting the binding of IGF-I and IGF-II
CC to IGF-IR. An antibody binding to insulin-like growth factor I receptor
CC (IGF-IR) and inhibiting the binding of IGF-I and IGF-II to IGF-IR, where
CC the antibody is of IgG1 isotype and shows a ratio of inhibition of the
CC binding of IGF-I to IGF-IR to the inhibition of binding of IGF-II to IGF-
CC IR of 1:3 to 3:1 and induces cell death of 20% or more cells of a
CC preparation of IGF-IR expressing cells after 24 hours at a concentration
CC of the antibody of 100 nM by ADCC, is new. An antibody of the invention
CC has cytostatic activity, and may have a use in antibody therapy. The
CC methods and compositions of the present invention are useful for the
CC treatment of tumors and cancers of the colon, breast, prostate and lung
CC using antibodies against human insulin-like growth factor I receptor (IGF
CC -IR). The present sequence represents the heavy chain variable region of
CC the IGF-IR antibody 8 of the invention.

 XX
 XX Example 4; SEQ ID NO 36; 172pp; English.
 PS
 XX The invention describes a human binding molecule capable of binding to
 CC human CD1a. Also described are: a functional variant of a human binding
 CC molecule above, where the functional variant is capable of competing for
 CC specifically binding to human CD1a; an immunoconjugate comprising a human
 CC binding molecule above, or a functional variant of (1), the
 CC immunoconjugate further comprising at least one tag; a nucleic acid
 CC molecule encoding a human binding molecule above or a functional variant
 CC of (1); a vector comprising at least one nucleic acid molecule; a host
 CC comprising at least one vector; a method of producing a human binding
 CC molecule above or a functional variant of (1); a method of identifying a
 CC human binding molecule specifically binding to human CD1a or a nucleic
 CC acid molecule encoding a human binding molecule specifically binding to
 CC CD1a; a method of obtaining a human binding molecule specifically binding
 CC to the human CD1a or a nucleic acid molecule encoding a human binding
 CC molecule specifically binding to the human CD1a; a composition comprising
 CC a binding molecule above, a functional variant of (1), an immunoconjugate
 CC of (2), or a nucleic acid molecule of (3); a pharmaceutical composition
 CC comprising a binding molecule above, a functional variant of (1), an
 CC immunoconjugate of (2), or a composition of (9), the pharmaceutical
 CC composition further comprising at least one pharmaceutical excipient; and
 CC a method of detecting CD1a. The binding molecule, functional variant,

CC immunoconjugate, composition, or a pharmaceutical composition is useful
 CC for preparing a medicament for the diagnosis, prevention, treatment, or
 CC their combination, of a neoplastic disorder or disease, e.g. acute
 CC myeloid leukemia, chronic myeloid leukemia, chronic myelogenous leukemia
 CC in blast crisis, chronic myelomonocytic leukemia, acute promyelocytic
 CC leukemia, myelodysplastic syndrome, juvenile myelomonocytic leukemia,
 CC acute lymphoblastic leukemia, acute non-lymphocytic leukemia, T-cell
 CC acute lymphoblastic leukemia, large granular lymphocytic leukemia, B-cell
 CC chronic lymphocytic leukemia and Langerhans cell histiocytosis. This is
 CC the amino acid sequence of a human CD1a specific single chain variable
 CC fragment (scFv) antibody.

PT New VHH polypeptides derived from Camelidae antibodies directed against
 PT IggE, useful for preventing, treating or alleviating disorders such as
 PT inflammation, cancer, gastritis, tuberculosis, allergies or transplant
 PT rejection.

XX Claim 3; SEQ ID NO 11; 125pp; English.

PS This invention relates to novel methods for administration of protein
 CC therapeutic molecules so as to avoid inactivation through use of VHH
 CC antibodies derived from Camelidae antibodies. The invention may be useful
 CC for the production of compounds with antiinflammatory, cytostatic,
 CC gastrointestinal-Gen, antitubercular, tuberculosis, flu, allergies,
 CC antiallergic or immunosuppressive activity or for gene therapy. The
 CC polypeptide construct and method are useful for treating, preventing
 CC lung cancer, indigestion, gastritis, tuberculosis, flu, allergies,
 CC transplant rejection or autoimmune disorder. These may also be used in
 CC preparing a medicament for treating, preventing and/or alleviating the
 CC above disorders. The present sequence is that of a Camelidae-derived VHH
 CC protein which may be used during the method of the invention.

PS Claim 29; SEQ ID NO 34; 125pp; English.

XX This invention relates to novel methods for administration of protein
 CC therapeutic molecules so as to avoid inactivation through use of VHH
 CC antibodies derived from Camelidae antibodies. The invention may be useful
 CC for the production of compounds with antiinflammatory, cytostatic,
 CC gastrointestinal-Gen, antitubercular, tuberculosis, flu, allergies,
 CC antiallergic or immunosuppressive activity or for gene therapy. The
 CC polypeptide construct and method are useful for treating, preventing
 CC and/or alleviating disorders such as inflammation, colon, head, neck or
 CC lung cancer, indigestion, gastritis, tuberculosis, flu, allergies,
 CC transplant rejection or autoimmune disorder. These may also be used in
 CC preparing a medicament for treating, preventing and/or alleviating the
 CC above disorders. The present sequence is that of a Camelidae-derived VHH
 CC protein which may be used during the method of the invention.

XX Antibodies against B Lymphocyte Stimulating polypeptides, useful for the
 PT diagnosis and treatment of cancers and immune disorders.

PS Claim 1; Page 2731-2732; 3148pp; English.

XX This invention describes novel antibodies that immunospecifically bind to
 CC B Lymphocyte Stimulator (BlyS) polypeptides. BlyS is a member of the
 CC tumour necrosis factor (TNF) super family and induces B cell

CC proliferation and differentiation. The antibodies of the invention have
CC cytostatic, immunosuppressive, immunostimulant, immunomodulatory,
CC antirheumatic and antiAIDS activity and can be used in vaccines to
CC inhibit the expression and activity of Blys. The antibodies bind to Blys
CC and so may be used to detect and quantitate the presence of Blys in
CC biological samples and may be used in this way to diagnose disease
CC associated with aberrant expression of Blys. They may also be
CC administered to treat diseases associated with aberrant Blys expression
CC and activity such as cancer, immune, and autoimmune disorders and
CC diseases, e.g. systemic lupus erythematosus, rheumatoid arthritis,
CC immunodeficiency (e.g. common variable immunodeficiency (CVID) and
CC acquired immunodeficiency syndrome (AIDS)). ABP4390-ABP4728 represent
CC the antibodies and fragments of the antibodies described in the method of
CC the invention

XX Novel antibody that immunospecifically binds to a B lymphocyte stimulator
PT (Blys), useful for detecting and treating diseases or disorders e.g.
PT rheumatoid arthritis, asthma and leukemia.

XX Example 1; SEQ ID NO 1953; 394pp; English.

XX This invention relates to novel antibodies that immunospecifically bind
CC to B lymphocyte stimulator (Blys). The Blys gene has been mapped to
CC chromosome 13q34 and encodes a protein that is a member of the tumour
CC necrosis factor superfamily and induces both in vivo and in vitro B cell
CC proliferation and differentiation. Specifically, it refers to single
CC chain antibody molecules (scFvs) derived, preferably, from the variable
CC heavy CDR3 region that immunospecifically bind to a polypeptide, or
CC fragment thereof, of either human, murine, rat or monkey Blys. The

CC present invention refers to the use of such antibodies in various methods
CC for the detection, diagnosis and prognosis of diseases related to the
CC aberrant expression or inappropriate function of Blys or its receptor. As
CC such, these compositions are useful for identifying immune disorders
CC including myasthenia gravis and multiple sclerosis, inflammatory
CC disorders e.g. asthma and rheumatoid arthritis, infectious diseases such
CC as AIDS and proliferative disorders including leukaemia, carcinoma and
CC lymphoma. Accordingly, they can be described as exhibiting various
CC activities such as antirheumatic, antiarthritic, neuroprotective,
CC antiinflammatory, antiasthmatic, antiallergic and cytostatic. This
CC polypeptide sequence is a single chain antibody that binds Blys of the
CC invention. NOTE: The sequence data for this patent did not form part of
CC the printed specification, but was obtained in electronic format
CC directly from WIPO at ftp.wipo.int/pub/published pct_sequences.

XX
XX New phage display library of variable heavy domain antigen-binding
PT fragments derived from llama antibodies, useful for in vitro selection
PT against any antigen of interest as a target.
XX
XX Disclosure; Page 19a; 46pp; English.

XX The present invention relates to a phage display library of variable
CC heavy domain (VHH or VH) fragments (sdAb fragments) derived from llama
CC antibodies. The library is useful for in vitro selection against any
CC antigen of interest as a target. Single domain anti-idiotypic antibody
CC fragments are isolated from the library using phage display technology
CC and an antibody serving as an antigen. Such anti-idiotypic antibody
CC fragments have great potential in evoking the immune system response to
CC pathological antigens and in vaccine development. The large size of the
CC library considerably increases the probability of isolating from it
CC antigen-binding fragments having high affinity to almost any
CC predetermined target (antigen of interest). The library eliminates the
CC development of anti-idiotypic antibodies by immunisation and allows
CC isolation of anti-idiotypic antibodies. AAU82435-AAU82635 represent the
CC llama heavy chain domain fragments of the invention. (Updated on 29-AUG-
CC 2003 to standardise OS field)

 PT New recombinant human monoclonal antibody that specifically binds to
 PT Tumor Necrosis Factor-alpha, useful for treating neoplastic disease such
 PT as cancers, or immuno-mediated inflammatory diseases such as rheumatoid
 PT arthritis.
 XX
 PS Example 10; SEQ ID NO 120; 213pp; English.
 XX
 CC The present invention describes a human monoclonal antibody (I) that
 CC specifically binds to tumour necrosis factor-alpha (TNFa) and comprises:
 CC (a) a heavy chain complementarity determining region 1 (CDR1) having the
 CC two fully defined 5 amino acid sequence (S1, ADP22417) or (S2, ADP22421);
 CC and (b) a light chain CDR1 having the two fully defined 11 amino acid
 CC sequence (S3, ADP22416) or (S4, ADP22424). Also described: (1) assaying
 CC (M1) the level of TNFa in a patient sample, comprising contacting with
 CC (I), and detecting the level of binding between the antibody and TNFa in
 CC the sample; (2) a composition comprising the antibody or its functional
 CC fragment and a carrier; (3) treating (M2) an animal suffering from a
 CC neoplastic, or an immuno-mediated inflammatory disease by selecting an
 CC animal in need of treatment for the disease by administering the human
 CC monoclonal antibody of (I); and (4) inhibiting (M3) TNFa induced
 CC apoptosis in an animal by selecting an animal in need of treatment for
 CC TNFa induced apoptosis by administering the human monoclonal antibody of
 CC (I). (I) has anabolic, antiarteriosclerotic, antiarthritic,
 CC antibacterial, antiinflammatory, antipsoriatic, antirheumatic, eating-
 CC disorders, immunomodulator, immunosuppressive, nephrotropic,
 CC neuroprotective, vasotropic and antiapoptotic activities, and can be used
 CC as a TNFa antagonist. The antibody (I) is useful in the preparation of
 CC medicament for treating TNF induced apoptosis, neoplastic disease such as
 CC breast cancer, ovarian cancer, bladder cancer, lung cancer, glioblastoma,
 CC stomach cancer, endometrial cancer, kidney cancer, colon cancer,
 CC pancreatic cancer, and prostate cancer; or immuno-mediated inflammatory
 CC diseases such as rheumatoid arthritis, glomerulonephritis,
 CC atherosclerosis, psoriasis, restenosis, autoimmune disease, Crohn's
 CC disease, graft-host reactions, septic shock, cachexia, anorexia, and
 CC multiple sclerosis. The present sequence represents a human anti-TNFa
 CC antibody light chain variable region, which is used in the
 CC exemplification of the present invention.

 PS
 XX
 CC The present invention relates to new interleukin-4 (IL-4) receptor
 CC antagonists, and in particular to antibodies and antibody derivatives
 CC that bind to interleukin-4 receptor alpha (IL-4R alpha). IL-4 stimulates
 CC the growth of T cells, mast cells, granulocytes, megakaryocytes, and
 CC erythrocytes. IL-4 also stimulates the proliferation of several IL-2 and
 CC IL-3-dependent cell lines, induces expression of class II major
 CC histocompatibility complex molecules on resting B cells, and enhances the
 CC secretion of IgE and IgG1 isotypes by stimulated B cells. IL-4 is
 CC associated with a TH2-type immune response. IL-4 has been implicated in a
 CC number of disorders, such as allergy and asthma. Provided is an antibody
 CC comprising a light chain variable domain or a heavy chain variable
 CC domain, where the antibody binds to the human interleukin (IL)-4
 CC receptor. The antibody domains each have various amino acid
 CC substitutions. Also disclosed is a method of inhibiting an IL-4 receptor
 CC by contacting a cell expressing an the receptor with the antibody under
 CC binding conditions, where binding inhibits signal transduction through
 CC the IL-4 receptor. The antibody is useful for treating a condition such
 CC as such as an inflammatory or cancerous condition, e.g. asthma,
 CC arthritis, dermatitis, urticaria, ulcerative colitis, scleroderma,
 CC scarring, prostate hyperplasia, a lung disorder, condition of the
 CC epithelial barrier, digestive system disorder, allergic reaction to a
 CC drug, Kawasaki disease, sickle cell anemia, Grave's disease, pre-
 CC eclampsia, Sjogren's syndrome, autoimmune disease, Barrett's esophagus,
 CC tuberculosis, cystic fibrosis, chronic obstructive pulmonary disease,
 CC adult respiratory distress syndrome, hyper IgE syndrome, pemphigus
 CC vulgaris, myasthenia gravis, chronic fatigue syndrome, or nephrosis. The
 CC antibody has a mutation in a hinge region that alleviates a tendency to
 CC form intra-H chain disulfide bond antibody. The preferred sequence is an
 CC undefined antibody heavy chain variable region, designated 63.

 XX
 CC Composition useful for treating or preventing sepsis, autoimmune
 CC disorders and pulmonary disorders, comprises polypeptide having single
 CC human immunoglobulin variable domain that binds polypeptide antigen, e.g.
 CC human cytokine.
 CC
 XX Example 11; SEQ ID NO 90; 169pp; English.
 XX
 CC The invention relates to a composition comprising a polypeptide having a
 CC single human immunoglobulin variable domain that binds a polypeptide
 CC antigen with Kd less than or equal to 100 nM, where the polypeptide is
 CC present at a concentration of at least 400 microm as determined by
 CC absorbance of light at 280 nm wavelength. The polypeptides are termed
 CC domain antibodies (dab) and may occur as homodimers or heterodimers
 CC (where the second polypeptide is a partner dab which does not bind to the
 CC target protein, linked via (Gly4Ser)n linkers. The dab polypeptides
 CC contain human framework regions, synthetic/modified complementarity
 CC domains (CDR) or contain mutations at positions defined in the
 CC specification. dab antibodies were created which bind to TNFalpha, TNF
 CC receptor (p55), mouse serum albumin (MSA) and human serum albumin (HSA).
 CC The polypeptide is useful for treating or preventing a disease or
 CC disorder in an individual in need of treatment, which involves
 CC administering the polypeptide to the individual. The polypeptide (or an

CC extended release dosage formulation containing it) is useful for
 CC preventing or treating diseases or disorders related to target antigens,
 CC such as inflammation, sepsis, allergic hypersensitivity, cancer,
 CC autoimmune disorders (e.g., diabetes, rheumatoid arthritis, multiple
 CC sclerosis, Crohn's disease, ulcerative colitis, aplastic anemia,
 CC Hashimoto's disease, Graves disease, Reiter's syndrome), transplant
 CC rejection, graft versus host disease, pulmonary disorder (e.g., pneumonia
 CC fibrosis, pulmonary sarcoidosis), cardiac disorders (e.g., ischemia of
 CC heart), inflammatory bone disorders, hepatitis, reperfusion injury and
 CC pyrexia. The polypeptide comprises single immunoglobulin variable domain
 CC polypeptides that bind target antigen with high affinity and are soluble
 CC at high concentration, without aggregation or precipitation. The present
 CC sequence represents a dAb antibody of the invention.

XX New polypeptides derived from single domain heavy chain antibodies
 PT directed to interferon-gamma, useful for preventing, treating or
 PT alleviating disorders such as inflammation, multiple sclerosis, diabetes
 PT or Grave's disease.

XX PS Claim 3; SEQ ID NO 34; 86pp; English.

XX The present invention relates to an anti-interferon-gamma (anti-IFN- ϵ ggr;
 CC) polypeptide comprising at least one anti-IFN- ϵ ggr; single domain
 CC antibody. The composition and methods are useful for treating, preventing
 CC and/or alleviating disorders related to inflammatory processes, disorders

CC requiring the delivery of an IFN- ϵ ggr; modulating polypeptide that is
 CC able to pass through the gastric environment without being inactivated,
 CC disorders requiring the delivery of an IFN- ϵ ggr; modulator or a
 CC therapeutic compound to the vaginal and/or rectal tract, to the upper
 CC respiratory tract and lung, through the tissues beneath the tongue or
 CC through the skin, or disorders increasing the permeability of the
 CC intestinal mucosa. These may also be used for preparing a medicament for
 CC treating, preventing and/or alleviating the disorders cited above,
 CC particularly inflammation, rheumatoid arthritis, Crohn's disease,
 CC ulcerative colitis, inflammatory bowel syndrome, multiple sclerosis,
 CC Addison's disease, autoimmune hepatitis, autoimmune parotitis, diabetes
 CC type I, epidiidymitis, glomerulonephritis, Grave's disease, Guillain-Barre
 CC syndrome, Hashimoto's disease, hemolytic anemia, systemic lupus
 CC erythematosus, male infertility, myasthenia gravis, pemphigus, psoriasis,
 CC rheumatic fever, sarcoidosis, scleroderma, Sjogren's syndrome,
 CC spondyloarthropathies, thyroiditis or vasculitis. The anti-IFN- ϵ ggr;
 CC polypeptide is also used for purifying IFN- ϵ ggr; or for inhibiting the
 CC interaction between the IFN- ϵ ggr; and IFN- ϵ ggr; receptors. The present
 CC sequence represents an anti human -IFN-gamma polypeptide.

 PT Identifying peptides that induce cytotoxic T-lymphocyte, CTL response
 PT against IGE, by identifying peptide eliciting CTL response to IGE
 PT peptides naturally presented by major histocompatibility complex class I
 PT protein.
 XX
 XX Example 7; Page 164-167; 187pp; English.
 PS
 XX The present invention describes a method (M1) for identifying peptides
 CC that induce cytotoxic T-lymphocyte (CTL) response against immunoglobulin
 CC E (IGE), comprising providing a test peptide (T) suspected of being able
 CC to bind to major histocompatibility complex (MHC) class I molecule, and
 CC evaluating (T) for ability to elicit in a mammal a CTL response to
 CC naturally processed and presented IGE peptides, where a peptide that
 CC induces such a response is identified. Also described are compositions:
 CC (C1) comprising at least one immunogenic peptide (I) identified by (M1);
 CC (C2) comprising at least one isolated polynucleotide encoding (I); and
 CC (C3) comprising antigen-presenting cells that recognise at least one (I).
 CC Where C1-3 are able to bind to at least one MHC class I molecule and to
 CC elicit in a mammal a CTL response to naturally processed and presented
 CC IGE peptides. C1-3 have anti-allergic, antiasthmatic, immunosuppressive,
 CC vasotropic, dermatological, anti-inflammatory and cytostatic activities,
 CC and can be used as inducers of a CTL response against IGE, and in
 CC vaccines. C1-3 can be used for modulating an IGE-mediated condition in a
 CC mammal. C1-3 are useful for modulating an IGE-mediated condition such as
 CC IGE-mediated atopic hypersensitivity condition, IGE-mediated non-atopic
 CC hypersensitivity condition, IGE myeloma in a mammal. Preferably, C1-3 are
 CC useful for treating atopic hypersensitivity conditions (such as allergic
 CC rhinitis, allergic asthma, food allergies, or atopic dermatitis), non-
 CC atopic hypersensitivity conditions (such as anaphylaxis, and urticaria
 CC hives). The present sequence represents an IGE heavy chain amino acid
 CC sequence, which is given in an example from the present invention

 XX Preparing a blood brain barrier (BBB) transmigration llama antibody
 PT fragment (LF) by enriching phages displaying LF, for species internalized
 PT by endothelial cells expressing BBB antigens, and which transigrate
 PT across in vitro BBB.
 XX
 PS Disclosure; Page 20; 70pp; English.
 XX
 XX The invention discloses the preparation of a human blood-brain barrier
 CC (BBB) transmigration single-domain antibody (dAB or sDAB) fragment
 CC derived from a llama antibody. Preparation involves providing a phage
 CC display library of antigen-binding antibody fragments derived from llama
 CC antibodies, enriching the library for phage species selectively binding
 CC to, and internalized into, human cerebrovascular endothelial cells
 CC (HCBC) expressing BBB antigens and then recovering these enriched library
 CC phage particles. The DNA of the phage particles identified is then cloned
 CC into an expression vector and the antigen-binding antibody fragments can
 CC then be prepared. Each antigen-binding fragment comprises at least a part
 CC of the variable heavy domain (VH or VH) of a llama antibody. The
 CC variable domains are not uniformly variable throughout their length and
 CC three regions, known as hypervariable regions (loops) or complementarity
 CC determining regions (CDR1, CDR2 and CDR3), show more variability than the
 CC rest of the domain. It is these regions that determine the specificity of
 CC the antigen-antibody interaction. The antigen-binding antibody fragments
 CC are useful as therapeutic or diagnostic agents, when linked, directly or
 CC indirectly, covalently or non-covalently, to a therapeutic or diagnostic
 CC entity. Due to their small size, and selectivity of binding to brain
 CC endothelium and ability to cross the BBB, the antigen-binding antibody
 CC fragments are useful, not only as vectors for the delivery of therapeutic
 CC and diagnostic agents into the brain, but also as molecular templates for
 CC designing drug and gene delivery vectors targeting the central nervous
 CC system. The peptides in AB851973-AB852059 show the CDR1/H1, CDR2 and CDR3
 CC variable sequences from 28 sDABs from the llama phage display library.

 XX New phage display library of variable heavy domain antigen-binding
 PT fragments derived from llama antibodies, useful for in vitro selection
 PT against any antigen of interest as a target.
 PT
 XX
 XX Disclosure; Page 13a; 46pp; English.
 PS
 XX The present invention relates to a phage display library of variable
 CC heavy domain (VHH or VH) fragments (sdAb fragments) derived from llama
 CC antibodies. The library is useful for in vitro selection against any
 CC antigen of interest as a target. Single domain anti-idiotypic antibody
 CC fragments are isolated from the library using phage display technology
 CC and an antibody serving as an antigen. Such anti-idiotypic antibody
 CC fragments have great potential in evoking the immune system response to
 CC pathological antigens and in vaccine development. The large size of the
 CC library considerably increases the probability of isolating from it
 CC antigen-binding fragments having high affinity to almost any
 CC predetermined target (antigen of interest). The library eliminates the
 CC development of anti-idiotypic antibodies by immunisation and allows
 CC isolation of anti-idiotypic antibodies. AAU82435-AAU82635 represent
 CC llama heavy chain domain fragments of the invention. (Updated on 29-AUG-
 CC 2003 to standardise OS field)

XX Spatially-addressable set of single exon nucleic acid probes, used to
 PT measure gene expression in human lung samples.
 XX
 XX Claim 27; SEQ ID NO 32647; 634pp; English.

XX The invention relates to a spatially-addressable set of single exon
 CC nucleic acid probes for measuring gene expression in a sample derived
 CC from human lung comprising single exon nucleic acid probes having one of

CC 12614 nucleic acid sequences mentioned in the specification, or their
 CC complements or the 12367 open reading frames derived from the 12614
 CC probes. Also included are a microarray comprising the novel set of probes
 CC; the novel set of probes which hybridise at high stringency to a nucleic
 CC acid expressed in the human lung; measuring gene expression in a sample
 CC derived from human lung, comprising (a) contacting the array with a
 CC collection of detectably labeled nucleic acids derived from human lung
 CC mRNA, and (b) measuring the label detectably bound to each probe of the
 CC array; identifying exons in a eukaryotic genome, comprising (a)
 CC algorithmically predicting at least one exon from genomic sequences of
 CC the eukaryote; and (b) detecting specific hybridisation of detectably
 CC labeled nucleic acids from eukaryote lung mRNA, to a single exon probe,
 CC having a fragment identical to the predicted exon, the probe is included
 CC in the above mentioned microarray; assigning exons to a single gene,
 CC comprising (a) identifying exons from genomic sequence by the method
 CC above and (b) measuring the expression of each of the exons in several
 CC tissues and/or cell types using hybridisation to a single exon
 CC microarrays having a probe with the exon, where a common pattern of
 CC expression of the exons in the tissues and/or cell types comprising one
 CC the exons should be assigned to a single gene; a peptide comprising one
 CC of 12011 sequences, mentioned in the specification, or encoded by the
 CC probes/open reading frames (ORF). The probes are used for gene expression
 CC analysis, and for identifying exons in a gene, particularly using human
 CC lung derived mRNA and for the study of lung diseases such as asthma, lung
 CC cancer, chronic obstructive pulmonary disease (COPD), interstitial lung
 CC disease (ILD), familial idiopathic pulmonary fibrosis, neurofibromatosis,
 CC tuberous sclerosis, Gaucher's disease, Niemann-Pick disease, Hermansky-
 CC Pudlak syndrome, sarcoidosis, pulmonary haemosiderosis, pulmonary
 CC histiocytosis, lymphangioleiomyomatosis, pulmonary alveolar proteinosis,
 CC Karagener syndrome, fibrocystic pulmonary dysplasia, primary ciliary
 CC dyskinesia, pulmonary hypertension and hyaline membrane disease. The
 CC present sequence is a peptide/protein encoded by a single exon probe of
 CC the invention. Note: The sequence data for this patent did not form part
 CC of the printed specification, but was obtained in electronic format
 CC directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

 CC enhanced binding characteristics which selectively and/or specifically
 CC binds to a target cell in favour of other cells, where binding is
 CC primarily determined by a first hypervariable region and Fv is a single
 CC chain Fv (scFv) or a disulfide Fv (dsFv). The peptide, optionally in
 CC association with or attached, coupled, combined, linked or fused to a
 CC pharmaceutical agent, is useful in the manufacture of a medicament, where
 CC the medicament has activity against a diseased cell, preferably a cancer
 CC cell (selected from carcinoma, sarcoma, leukaemia, adenoma, lymphoma,
 CC myeloma, blastoma, seminoma, and melanoma, where the leukaemia cell is an
 CC acute myeloid leukaemia cell). The peptide is also useful for preparing a
 CC composition for use in inhibiting the growth of a diseased or cancer
 CC cell. This sequence represents a human Fv molecule hypervariable region
 CC related peptide of the invention

 XX Novel isolated epitope present on cancer cells and important in
 PT physiological phenomena such as cell rolling, metastasis and
 PT inflammation, for treating autoimmune, inflammatory or cardiovascular
 PT diseases, and cancer.
 XX
 PS Disclosure; Page 260; 0pp; English.

XX The invention relates to an isolated epitope present on cancer cells and
 CC important in physiological phenomena such as cell rolling, metastasis and
 CC inflammation, where the epitope is capable of being bound by an antibody,
 CC its antigen-binding fragment or its complex comprising at least one
 CC antibody or its binding fragment having a first hypervariable region. The
 CC epitopes are useful for inhibiting cell rolling, inflammation, autoimmune
 CC disease, thrombosis, restenosis, metastasis, growth and/or replication of
 CC tumour or leukaemia cells, increase in number of tumour or leukaemia
 CC cells in a patient, cell-cell, cell-matrix, platelet-matrix, platelet-
 CC platelet and/or cell-platelet adhesion or aggregation, for increasing
 CC mortality of tumour or leukaemia cells, for increasing the susceptibility
 CC of diseased cells to damage by anti-disease, anti-cancer or anti-
 CC leukaemia agents, or for decreasing the number of tumour or leukaemia
 CC cells in a patient, or in the manufacture of a medicament for the above
 CC mentioned purposes. The epitopes are useful for diagnosing and treating
 CC diseases such as cancer, leukaemia, autoimmune diseases, inflammatory
 CC diseases, cardiovascular diseases such as myocardial infarction,
 CC retinopathic diseases and other diseases mediated by abnormal platelet
 CC function and diseases caused by sulphated tyrosine-dependent protein-
 CC protein interactions. This sequence represents a human antibody fragment
 CC of the invention

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

CC This sequence represents a modified version of the rat rW12 heavy chain
 CC variable region, designated KOLWI2VH-1. This sequence is used in an
 CC antibody of the invention. The antibody of the invention is a chimeric or
 CC humanised anti-idiotype antibodies (cAb and hAb, respectively) or a
 CC fragment which specifically binds to the idiotype region of an anti-
 CC carcinoembryonic antigen (CEA), where: (i) cAb comprises the rW12 light
 CC (L) and heavy (H) chain variable regions, or silent mutations; and (ii)
 CC hAb comprises rW12 complementarity determining regions (CDR) and
 CC humanised framework (FR) regions. The hAb is used as a vaccine to
 CC stimulate an immune response in a patient against cancers expressing CEA.
 CC The hAb, can be used to clear non-targeted antibody in a method of
 CC diagnosis or treatment of a patient where a CEA antibody is used as a
 CC (pre-)targeting or therapy agent. The CAB is used to detect the presence
 CC of an antibody that specifically binds to CEA in a sample

PS

XX The invention describes a recombinant DNA construct comprising a
 CC polynucleotide consisting of a sequence encoding an amino acid sequence
 CC available in electronic form from the US patent office at
 CC ftp.segdata.uspto.gov/sequence.html?DocID:2004034888. The polynucleotide
 CC of the invention are also useful in physical arrays of molecules and as
 CC plant breeding markers. The recombinant DNA construct is useful for
 CC improving plant tolerance to cold, heat, drought, herbicides, extreme
 CC osmotic conditions, pathogens or pests, for manipulating growth rate in
 CC plant cells by modification of the cell cycle pathway, for conferring
 CC increased resistance to plant disease, for producing galactomannan,
 CC lignin or plant growth regulators, for increasing the rate of homologous
 CC recombination in plants, for improving yield by modification of
 CC photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake
 CC or by providing improved plant growth and development under at least one
 CC stress condition or for modifying seed oil or protein yield and/or
 CC content. This is the amino acid sequence of a plant full length insert
 CC polypeptide that can be used in the recombinant DNA construct of the
 CC invention.

 PT e.g. cell wall elongation or expansion, enhancing silage or forage crop
 PT digestibility, improving plant defense against pathogens and stress.
 PT
 XX Claim 9; Page 69; 108pp; English.
 PS
 XX The present sequence is one of a number of glucanase polypeptides
 CC isolated from Zea mays. The nucleic acids encoding for glucanases are
 CC useful for improving cell wall elongation or expansion and altering the
 CC growth of a plant or improving kernel growth rates, enhancing silage or
 CC forage crop digestibility, plant defense against pathogens and stress,
 CC flowering, fruit and seed maturation, abscission and senescence, and

CC tissue differentiation. The nucleic acids may also be used as probes or
 CC amplification primers in the detection, quantitation or isolation of gene
 CC transcripts, and for detecting deficiencies in mRNA levels in screening
 CC for a desired transgenic plant. They can also be used for detecting gene
 CC mutations, for monitoring upregulation of expression or changes in enzyme
 CC activity in screening assays of compounds, and for detection of any
 CC number of allelic variants of the gene, as molecular markers in plant
 CC breeding programmes. The nucleic acids can be used for recombinant
 CC expression of exo- or endo-glucanase polypeptides, and as immunogens in
 CC preparing or screening antibodies. The proteins may also be used in
 CC assays for enzyme agonists or antagonists, or as immunogens or antigens
 CC to obtain antibodies immunoreactive with the protein

 XX New recombinant DNA construct comprising a promoter positioned to provide

PT for expression of a polynucleotide encoding a polypeptide from a
 PT microbial source, useful for producing plants with improved properties.
 XX
 XX Claim 1; SEQ ID NO 12370; 122pp; English.

XX The invention relates to a recombinant DNA construct comprising a
 CC promoter functional in a plant cell, where the promoter is positioned to
 CC provide for expression of a polynucleotide encoding a polypeptide from a
 CC microbial source. The invention also relates to a transformed plant
 CC comprising the recombinant DNA construct and a method of producing a
 CC transformed plant having an improved property. The plant is a crop plant
 CC such as maize or soybean. The method of producing a transformed plant
 CC having an improved property comprises transforming a plant with the
 CC recombinant DNA construct and growing the transformed plant, where the
 CC polynucleotide or polypeptide is useful for improving plant properties.
 CC The recombinant DNA construct is useful for producing plants with
 CC improved plant properties, e.g. improved cold, heat or drought tolerance,
 CC tolerance to herbicides, extreme osmotic conditions, pathogens or pests,
 CC increased resistance to plant disease, better growth rate by modification
 CC of the cell cycle pathway with plant growth regulators, increased rate of
 CC homologous recombination, modified seed oil or protein yield and/or
 CC content, improved yield by modification of carbohydrate, nitrogen or
 CC phosphorus use and/or uptake, by modification of photosynthesis or by
 CC providing improved plant growth and development under at least one stress
 CC condition, improved lignin production or improved galactomannan
 CC production. This sequence represents a bacterial polypeptide used in the
 CC scope of the invention. Note: The sequence data for this patent did not
 CC form part of the printed specification but was obtained in electronic
 CC format from USPTO at seqdata.uspto.gov/sequence.html.

XX New antisense nucleic acids, useful for identifying proteins or screening
 PT for homologous nucleic acids required for cellular proliferation to
 PT isolate candidate molecules for rational drug discovery programs.

XX Claim 25; SEQ ID NO 76434; 1766pp; English.

XX The invention relates to an isolated nucleic acid comprising any one of
 CC the 6213 antisense sequences given in the specification where expression
 CC of the nucleic acid inhibits proliferation of a cell. Also included are:
 CC (1) a vector comprising a promoter operably linked to the nucleic acid
 CC encoding a polypeptide whose expression is inhibited by the antisense
 CC nucleic acid; (2) a host cell containing the vector; (3) an isolated
 CC polypeptide or its fragment whose expression is inhibited by the
 CC antisense nucleic acid; (4) an antibody capable of specifically binding
 CC the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular
 CC proliferation or the activity of a gene in an operon required for
 CC proliferation; (7) identifying a compound that influences the activity of
 CC the gene product or that has an activity against a biological pathway
 CC required for proliferation, or that inhibits cellular proliferation; (8)
 CC identifying a gene required for cellular proliferation or the biological
 CC pathway in which a proliferation-required gene or its gene product lies
 CC or a gene on which the test compound that inhibits proliferation of an
 CC organism acts; (9) manufacturing an antibiotic; (10) profiling a
 CC compound's activity; (11) a culture comprising strains in which the gene
 CC product is overexpressed or underexpressed; (12) determining the extent
 CC to which each of the strains is present in a culture or collection of
 CC strains; or (13) identifying the target of a compound that inhibits the
 CC proliferation of an organism. The antisense nucleic acids are useful for
 CC identifying proteins or screening for homologous nucleic acids required
 CC for cellular proliferation to isolate candidate molecules for rational
 CC drug discovery programs, or for screening homologous nucleic acids
 CC required for proliferation in cells other than *S. aureus*, *S. typhimurium*,
 CC *K. pneumoniae* or *P. aeruginosa*. The present sequence is encoded by one of
 CC the target prokaryotic essential genes. Note: The sequence data for this

 PT *Enterococcus faecium* polypeptide useful for detection, prevention and
 PT treatment of a pathological condition resulting from a bacterial
 PT infection.
 XX Example 1; SEQ ID NO 5551; 243pp; English.
 PS The invention relates to an isolated nucleic acid derived from
 XX *Enterococcus faecium* encoding an *Enterococcus faecium* polypeptide having
 CC one of 10 fully defined sequences given in the (or comprising 40
 CC sequential nucleotides chosen from any of the nucleic acids, its
 CC complement or sequences hybridising to it). Also included are a
 CC recombinant vector comprising the nucleic acid operably linked to
 CC a transcription regulatory element, a cell comprising the vector and a
 CC single-stranded probe comprising the nucleic acid. The nucleic acids are
 CC chosen from 3654 disclosed sequences encoding 3654 disclosed proteins.
 CC The nucleic acids are useful for diagnosing pathological conditions
 CC resulting from *E. faecium* bacterial infection (e.g. urinary tract
 CC infection, bacteraemia, endocarditis, wounds and abdominal-pelvic
 CC infection) and for screening drugs such as agonists and antagonists. The
 CC nucleic acid is useful for recombinant production of *Candida albicans* -
 CC derived peptides or antisense polypeptides. Pharmaceutical compositions
 CC and vaccines containing the nucleic acid are useful for preventing or
 CC treating *Enterococcus faecium* infections. The present sequence represents

XX Claim 4; SEQ ID NO 290; 480pp; English.
 PS This invention relates to a novel composition which comprises at least
 CC one protein (or fragment of) encoded by an open reading frame (ORF) of a
 CC *Neisseria* sp. (ORF2086), where the ORF encoding a crossreactive
 CC immunogenic antigen provides immunogenicity against infection by
 CC *Neisseria meningitidis* serogroup B in a subject. The composition of the
 CC invention may have antibacterial or antiinflammatory activity through the
 CC induction of the immune response. The invention may be useful for the
 CC treatment of bacterial meningitis in a mammal. One or more polypeptides
 CC or nucleic acids encoding such polypeptides are useful in a composition
 CC or as a part of the treatment regimen for the prevention of amelioration
 CC of *Streptococcus pneumoniae* infection. The composition of the invention
 CC is non-pathogenic and substantially free from any infectious impurities.
 CC The immunogenic compositions can be compounded with fewer components to
 CC elicit protection comparable to previously used agents. The present
 CC sequence is the amino acid sequence of a peptide derived from a *Neisseria*
 CC meningitidis 2086 subfamily B protein which can be used to create the
 CC composition of the invention.

 PT polypeptide in a host cell comprises infecting, transfecting or
 PT transforming a host cell with an expression vector.

XX Claim 103; SEQ ID NO 65; 161pp; English.

XX This invention relates to a novel method of increasing the expression
 CC levels of a *Neisseria* PorA protein or polypeptide in a host cell which
 CC comprises infecting, transfecting or transforming a host cell with an
 CC expression vector, where codon 18 of the PorA gene is a codon other than
 CC an ATC. The invention may be useful for the production of compounds with
 CC an antibacterial activity or a vaccine. The method is useful for

CC increasing the expression levels of a *Neisseria* PorA protein or
 CC polypeptide in a host cell. The polypeptide or polynucleotide and
 CC composition are useful for immunising against *Neisseria*. The present
 CC sequence is that of a fragment of the *Neisseria meningitidis* ORF2086
 CC protein which may be used in combination with the PorA peptides and
 CC proteins of the invention to form immunogenic compositions.

XX New immunogenic compositions useful in the preparation of a medicament
 PT for inducing an immune response in a mammal, particularly in preventing,
 PT diagnosing and/or treating meningococcal infection.

XX PS Claim 92; SEQ ID NO 290; 160pp; English.

XX The invention describes a composition for the prevention and treatment of
 CC meningococcal disease. The composition comprises: a protein comprising 10
 CC -14 amino acids (SEQ ID NO: 444-452), or one of 56 odd numbered sequences
 CC from SEQ ID NO: 331-443, not given in the specification; a protein
 CC encoded by a polynucleotide that hybridises to one of the polynucleotides
 CC that encode SEQ ID NO: 444-452, or one of 56 even numbered sequences from
 CC SEQ ID NO: 330-442; an immunogenic portion of (a) or (b); or a biological
 CC equivalent of (a) or (b), or an immunogenic portion of (c). The
 CC compositions are used in preparing a medicament for inducing an immune
 CC response in a mammal, where the medicament is effective against bacterial
 CC meningitis in a mammal. The compositions can be used in preventing,
 CC diagnosing and/or treating meningococcal infection. This is the amino
 CC acid sequence of a bactericidal protein 2086 subfamily B associated
 CC peptide.

XX PT Genomic sequence of *Photorhabdus luminescens* and encoded polypeptides,

PT useful e.g. as therapeutic antimicrobials and agricultural pesticides.

XX PS Claim 2; SEQ ID NO 739; 1205pp; French.

XX CC The invention relates to the isolation of genes and their encoded

CC CC proteins from *Photorhabdus luminescens*. The isolated sequences are

CC CC sources of probes and primers for detecting the genome of *P. luminescens*

CC CC and related species; to study polymorphisms; for gene analysis and for

CC CC detection/amplification of the genes. Antibodies (Ab) raised against the

CC polypeptides encoded by the genes are used for detection/identification

CC of *P. luminescens*, e.g. in foods. The genes, proteins, Ab and cells that

CC carry a gene-containing vector are used to select compounds that

CC modulate, regulate, induce or inhibit expression of the genes in plants,

CC animals or microorganisms other than *P. luminescens* and are able to alter

CC response or sensitivity to toxins and antibiotics produced by *P.*

CC *luminescens*. Cells transformed to express the genes are useful for

CC recombinant production of the proteins, particularly toxins and

CC antibacterials useful as insecticides, bactericides and fungicides. The

CC genes, proteins, vectors containing the genes and Ab are also useful

CC therapeutically (to treat microbial infection by bacteria or fungi that

CC are sensitive to *P. luminescens*-encoded toxins or antibiotics) and as

CC biopesticides. Other uses of the genes and the proteins are as virulence

CC factors and for identifying targets of human diseases for which *P.*

CC *luminescens* is a model (particularly plague and whooping cough). This

CC sequence represents one of the isolated *P. luminescens* proteins

PT in mammal, comprising multiple variant of meningococcal protein NMB1870,

PT as antigen.

XX PS Claim 11; SEQ ID NO 81; 77pp; English.

XX CC The present invention relates to composition (I) comprising at least two

CC multiple variants of meningococcal protein NMB1870 (ADP70202-ADP70246,

CC ADP70278, ADP70280-ADP70286, ADP70288-ADP70295, ADP70324-ADP70343) as

CC antigen, (I) elicit a bactericidal response effective against each of

CC serogroup B *Neisseria meningitidis* strains MC58, 961-5945 and M1239, and

CC also elicit an antibody response which is bactericidal against *N.*

CC *meningitidis* strains in at least 2 of hypervirulent lineages ET-37, ET-5,

CC cluster A4, lineage 3, subgroup I, subgroup III, and subgroup IV-1. In

CC NMB1870 is a lipoprotein. In (I) at least one of the proteins does not
 CC include the amino acid sequence ADP70271 or ADP70272 within 10 amino
 CC acids of its N-terminus or at least one of the proteins does not include
 CC the amino acid sequences ADP70273 within 10 amino acids of its N-terminus
 CC or at least one of the proteins includes the amino acid sequence
 CC ADP70274. ADP70271-ADP70274 are sequence motifs for retention or omission
 CC from the NMB1870 proteins. (I) or (II) is efficiently elicits systemic
 CC and/or mucosal immunity and thereby prevents/treat meningitis and
 CC bacteremia. (I) is useful as medicament and for raising an antibody
 CC response in a mammal for protecting a mammal against a Neisserial
 CC infection.

XX Heterologous expression for the expression of two or more Neisserial
 XX proteins in fused state.

XX PS Claim 12; Page 19; 52pp; English.

XX The present invention relates to a method for simultaneous heterologous
 CC expression of two or more Neisserial proteins which are in a fused state.
 CC The method is useful for simultaneous heterologous expression of two or
 CC more Neisserial proteins. A protein that may be unstable or poorly
 CC expressed on its own is assisted by adding a suitable hybrid partner and
 CC commercial manufacture is simplified-only one expression and purification
 CC need to be employed in order to produce two separately- useful proteins.
 CC The present sequence is Neisseria meningitidis (serogroup B, strain 2996)
 CC deltaG 741 protein. (Updated on 11-SEP-2003 to standardise OS field)

XX PI Pizza M;

XX DR WPI; 2004-340823/31.

XX Composition useful for treating infection caused by hypervirulent
 XX lineages A4, ET-5 and lineage 3 of Neisseria meningitidis serogroup B,
 XX comprises five antigens NadA protein, 741 protein, 936 protein, 953
 XX protein and 287 protein.

XX PS Claim 29; SEQ ID NO 3; 53pp; English.

XX The present sequence is that of Neisseria meningitidis strain MC58
 CC (serogroup B) 741 protein from which the N-terminal region (amino acids 1
 CC -72) has been removed (deltaG-741 protein). This deletion can enhance
 CC recombinant expression and also removes the lipidation site. Protein 741
 CC is an extremely effective antigen for eliciting anti-meningococcal
 CC antibody responses, and is expressed across all meningococcal serogroups.
 CC The protein, and its variants, can be used in vaccine compositions of the
 CC invention. The invention is based on the discovery that a small number of
 CC defined antigens is able to provide broad protection against
 CC meningococcal infection. A composition is provided which is able induce
 CC an antibody response that is bactericidal against 2 or more of
 CC hypervirulent lineages A4, ET-5 and lineage 3 of N. meningitidis
 CC serogroup B. The preferred composition comprises a mixture of 10 or fewer
 CC purified antigens, and should not include complex or undefined mixtures
 CC of antigens such as outer membrane vesicles. The antigens are obtained by
 CC recombinant expression. A mixture of 5 defined protein antigens has been
 CC found to elicit a good protective immune response: a NadA protein, a 741
 CC protein, a 936 protein, a 953 protein, and a 287 protein. For maximum
 CC cross-strain efficacy, it is preferred that the composition should
 CC include more than one variant of protein 741; exemplary sequences are
 CC provided ADO071123-ADO07125.

PT New injectable immunogenic composition comprising saccharide antigens
PT from serogroup B Neisseria meningitidis, Hemophilus influenzae type B and
PT Streptococcus pneumoniae, useful in treating or preventing bacterial
PT meningitis.
XX
PS Disclosure; SEQ ID NO 3; 46pp; English.
XX
CC The present sequence is that of the 741 protein from Neisseria
CC meningitidis serogroup MenB strain MC58, minus the N-terminal poly-
CC glycine sequence. This deletion can enhance expression. Protein 741 is an
CC extremely effective antigen for eliciting anti-meningococcal antibody
CC responses, and it is expressed across all meningococcal serogroups. A
CC claimed injectable immunogenic composition comprises capsular saccharides
CC from at least 2 of serogroups A, C, W135 and Y of N. meningitidis, where
CC the capsular saccharides are conjugated to carrier protein(s) and/or are
CC oligosaccharides. The composition may further comprise an antigen from
CC one or more of serogroup B N. meningitidis, Haemophilus influenzae type
CC B, and/or Streptococcus pneumoniae. The serogroup B antigen is a NADa
CC protein in oligomeric form, a 741 protein, a 936 protein, a 953 protein
CC or a 287 protein. The immunogenic composition is useful in the
CC manufacture of an injectable medicament for the prevention and/or
CC treatment of bacterial meningitis (claimed). Preferred 741 protein
CC fragments for use in the compositions lack one or more amino acids from
CC the C-terminus and/or N-terminus of the present sequence, or comprise an
CC epitope of the polypeptide, or an allelic variant, homologue, mutant,
CC etc. For maximum cross-strain efficacy, preferred compositions include
CC more than one variant of protein 741 ADR23260-ADR23262.

XX
CC The invention relates to a method (M1) for simultaneous heterologous
CC expression of two or more Neisserial proteins, involving fusing two or
CC more Neisserial proteins (chosen from chosen from orf1, orf4, orf25,
CC orf40, orf83, 233, 287, 292L, 564, 687, 741, 907, 919, 953, 961
CC and 983) including domain deletion variants (e.g. N-terminal deletions
CC where all N-terminal amino acids up to and including the poly-Gly region
CC are deleted, termed deltaG). Also included are a protein expressed by
CC (M1) and a hybrid protein (P1) of formula NH2-A-B-COOH, where A and B are
CC different Neisserial proteins. (M1) is useful for simultaneous
CC heterologous expression of two or more Neisserial proteins and for
CC producing hybrid Neisserial proteins. The hybrid proteins produced by
CC (M1) enable production of antibodies with significant bactericidal
CC efficacy. The present sequence is a deltaG mutant Neisserial protein
CC suitable for use in the hybrid constructs.

An aqueous immunogenic composition for immunizing against bacterial meningitis comprises conjugated capsular saccharides from meningococcal serogroups C, W135, Y, B and A.

Disclosure; SEQ ID NO 3; 47pp; English.

The invention relates to an aqueous immunogenic composition which induces an immune response that is bactericidal against serogroups B, C, W135 and Y of *Neisseria meningitidis*, when administered to a patient. The composition comprises a conjugated serogroup C capsular saccharide antigen, a conjugated serogroup W135 capsular saccharide antigen, a conjugated serogroup Y capsular saccharide antigen, and one or more polypeptide antigens from serogroup B. The conjugated saccharides are oligosaccharides. The saccharides are conjugated to a carrier protein selected from diphtheria toxoid, tetanus toxoid, *Haemophilus influenzae* protein D and CRM197. The composition or in manufacturing a medicament for raising an immune response in a mammal. The composition and method may be used for immunizing against bacterial meningitis. This sequence represents an N. meningitidis 741 polypeptide with a deletion.

 PT meningitis, or its immunogenic portion or biological equivalent.
 XX Claim 60; SEQ ID NO 192; 480pp; English.
 XX This invention relates to a novel composition which comprises at least
 CC one protein (or fragment of) encoded by an open reading frame (ORF) of a
 CC *Neisseria* sp. (ORF2086), where the ORF encoding a crossreactive
 CC immunogenic antigen provides immunogenicity against infection by
 CC *Neisseria meningitidis* serogroup B in a subject. The composition of the
 CC invention may have antibacterial or antiinflammatory activity through the
 CC induction of the immune response. The invention may be useful for the
 CC treatment of bacterial meningitis in a mammal. One or more polypeptides
 CC or nucleic acids encoding such polypeptides are useful in a composition
 CC or as a part of the treatment regimen for the prevention of amelioration
 CC of *Streptococcus pneumoniae* infection. The composition of the invention
 CC is non-pathogenic and substantially free from any infectious impurities.
 CC The immunogenic compositions can be compounded with fewer components to
 CC elicit protection comparable to previously used agents. The present
 CC sequence is the amino acid sequence of a *Neisseria meningitidis* strain-
 CC specific mature 2086 protein which can be used to create the composition
 CC of the invention.

XX Composition for producing medicament for preventing *Neisseria* infection
 PT in mammal, comprising multiple variant of meningococcal protein NMB1870,
 PT as antigen.

XX Claim 11; SEQ ID NO 139; 77pp; English.

XX The present invention relates to composition (I) comprising at least two
 CC multiple variants of meningococcal protein NMB1870 (ADP70202-ADP70246,
 CC ADP70278, ADP70280-ADP70286, ADP70288-ADP70295, ADP70324-ADP70343) as
 CC antigen. (i) elicit a bactericidal response effective against each of
 CC serogroup B *Neisseria meningitidis* strains MC58, 961-5945 and M1239, and
 CC also elicit an antibody response which is bactericidal against N.
 CC meningitidis strains in at least 2 of hypervirulent lineages ET-37, ET-5,
 CC cluster A4, lineage 3, subgroup I, subgroup III, and subgroup IV-1. In
 CC NMB1870 is a lipoprotein. In (i) at least one of the proteins does not
 CC include the amino acid sequence ADP70271 or ADP70272 within 10 amino

CC acids of its N-terminus or at least one of the proteins does not include
 CC the amino acid sequences ADP70273 within 10 amino acids of its N-terminus
 CC or at least one of the proteins includes the amino acid sequence
 CC ADP70274. ADP70271-ADP70274 are sequence motifs for retention or omission
 CC from the NMB1870 proteins. (I) or (II) is efficiently elicits systemic
 CC and/or mucosal immunity and thereby prevents/treat meningitis and
 CC bacteraemia. (I) is useful as medicament and for raising an antibody
 CC response in a mammal for protecting a mammal against a Neisserial
 CC infection.

XX Composition comprising crossreactive immunogenic antigen encoded by open
 PT reading frame 2086 of Neisseria sp., that provides immunogenicity against
 PT meningitis, or its immunogenic portion or biological equivalent.

XX Claim 60; SEQ ID NO 158; 480pp; English.

XX This invention relates to a novel composition which comprises at least
 CC one protein (or fragment of) encoded by an open reading frame (ORF) of a
 CC Neisseria sp. (ORF2086), where the ORF encoding a crossreactive
 CC immunogenic antigen provides immunogenicity against infection by
 CC Neisseria meningitidis serogroup B in a subject. The composition of the
 CC invention may have antibacterial or antiinflammatory activity through the
 CC induction of the immune response. The invention may be useful for the
 CC treatment of bacterial meningitis in a mammal. One or more polypeptides
 CC or nucleic acids encoding such polypeptides are useful in a composition
 CC or as a part of the treatment regimen for the prevention of amelioration
 CC of Streptococcus pneumoniae infection. The composition of the invention
 CC is non-pathogenic and substantially free from any infectious impurities.

CC The immunogenic compositions can be compounded with fewer components to
 CC elicit protection comparable to previously used agents. The present
 CC sequence is the amino acid sequence of a Neisseria meningitidis strain-
 CC specific mature 2086 protein with a native leader sequence which can be
 CC used to create the composition of the invention.

CC -!- SUBCELLULAR LOCATION: Integral membrane protein. Inner membrane

CC (By similarity).

CC -!- INDUCTION: By N-acetylneuraminate (Probable).
CC -!- SIMILARITY: Belongs to the major facilitator superfamily. Sugar
CC transporter family. Sialic acid transporter (TC 2.A.1.12.1)
CC subfamily.
